Environmental Professional Statement/Certification

Onterris has performed this Phase I Environmental Site Assessment in conformance with the scope and limitations of 40 C.F.R. Part 312, ASTM E1527-21. Any exceptions to or deletions from this practice are described in Section 1.4 of this report. Sara Gozdor is the designated Environmental Professional (EP) for this assessment and has made and signed the following declaration:

I declare that, to the best of my professional knowledge and belief, I meet the definition of Environmental Professional as defined in §312.10 of 40 CFR 312. I have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the subject property. I have developed and performed all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

08/26/2026

Sara J. Gozdor
Senior Scientist III
Onterris USA, Inc.

Executive Summary

On behalf of The University of Central Florida (UCF), Onterris has performed a Phase I Environmental Site Assessment (ESA) for an approximately 27-acre, UCF-owned property located at the corner of North Alafaya Trail and McCulloch Road in Orlando, Florida (hereafter referred to as “Site 1 – Northern Site”, the “site”, or the “subject property”).

Onterris has performed a Phase I ESA on the subject property in conformance with the scope and limitations of ASTM International (ASTM) Standard E1527-21 Standard Practice for Environmental Site Assessment Process. Any exceptions to, or deletions from, this practice are described in Section 1.4 of this report.

The subject property is currently undeveloped, wooded land with various trails throughout and is utilized as outdoor recreation. There are no other known current or historical uses or structures on the subject property. The site is bound by McCulloch Road to the north, Gemini Boulevard South to the south, and North Alafaya Trail to the west. Commercial and residential properties surround the subject property to the north and west, with two ponds and Lake Claire to the east and UCF-owned Greek housing to the south.

Major Findings

This assessment did not reveal evidence of recognized environmental conditions (RECs)¹, historical RECs (HRECs)¹, controlled RECs (CRECs)¹, business environmental risks (BERs)¹, or de minimis conditions¹ in association with the subject property.

Data Gaps²

Onterris identified the following data gaps and/or failures for this Phase I:

- Onterris was unable to interview neighboring property owners or past subject property owners. While this is, by ASTM definition, a data gap, it is considered a low-significance data gap for the subject property because we believe these sources would not have provided information that would have altered the findings of this report. Information obtained through interviews, the User, and publicly available databases are believed to address this data gap, and therefore, it is assumed to be of low significance.

¹ RECs, HRECs, CRECs, BERs, and de minimis conditions are defined in Section 9.1.

² As per the ASTM standard, “significant data gaps” are those that affect the ability of the Environmental Professional to identify RECs and identify sources of information to address those data gaps. If significant data gaps are identified, it is our opinion that additional diligence or assessment (such as additional data review or physical sampling of environmental media) is required to address the data gap.

Additional Assessment

It is our professional opinion that no further assessment is warranted for the subject property.

1 Introduction

On behalf of The University of Central Florida (UCF), Onterris has performed a Phase I Environmental Site Assessment (ESA) for an approximately 27-acre, UCF-owned property located at the corner of North Alafaya Trail and McCulloch Road in Orlando, Orange County, Florida (hereafter referred to as “Site 1 – Northern Site”, the “site”, or the “subject property”).

The Phase I was conducted in accordance with Onterris’s proposal referenced in Section 1.7 and the requirements of ASTM International (ASTM) Standards E1527-21, Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process (“the ASTM standard”). UCF is identified as the User of this report, as defined by the ASTM standard. The Phase I ESA was performed in anticipation of development activities involving the subject property.

1.1 Scope of Work

The Phase I was conducted in accordance with the ASTM standard E1527-21, which meets the requirements of the All Appropriate Inquiries (AAI) Final Rule, 40 Code of Federal Regulations (CFR) Part 312, with the exclusion of those exceptions or deletions described in Section 1.4. The purpose of the Phase I was to identify, to the extent feasible pursuant to the ASTM standard, Recognized Environmental Conditions (RECs), Historical RECs (HRECs), or Controlled RECs (CRECs) in connection with the subject property. RECs and other key terms for this ESA are defined in Section 9.1.

Phase I activities were performed in pursuit of site-specific information related to current and historical:

- Uses of the subject property;
- Practices for the storage, use, and disposal of chemicals and waste;
- Releases or incidents on or near the subject property that could have resulted in adverse impacts to the subsurface or associated corrective and/or regulatory action; and
- Other conditions on or near the subject property that have resulted in, or threaten to result in, adverse impacts to the subsurface.
- Handling, manufacturing, and/or transportation of Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA) hazardous substances (including perfluorooctanoic acid (PFOA) and perfluorooctanesulfonic acid (PFOS)) onsite or a facility adjoining/surrounding the subject property.³

³ PFOA and PFOS are per- and polyfluoroalkyl substances (PFAS) compounds. Currently, they are the only PFAS compounds that are classified as hazardous substances under CERCLA; therefore, the potential presence of PFOA and PFOS was evaluated as part of this assessment. A review of other PFAS compounds is currently considered a non-scope item under the ASTM Standard. However, the databases and NAICS codes reviewed for PFOA and PFOS per this assessment may include other PFAS compounds.

Unless otherwise specified in this section, the scope of work of the Phase I included:

- A site reconnaissance of the subject property to visually observe current conditions and identify potential concerns;
- Interviews and a review of various historical resources to assess the history of the subject property and surrounding area;
- Observation of nearby and adjoining properties to evaluate the potential for offsite impacts to affect or have affected the subject property;
- Research and review of local city/county, tribal, state, and federal records, including interviews (where warranted) and contracting Environmental Data Resources, Inc. (EDR) to identify regulatory listings for the subject property and vicinity and regulatory-listed facilities in the vicinity of the subject property, as per the search distances specified in E1527-21; and
- Interviews with and/or review of information provided by the User, owner(s), and/or site operator, as deemed appropriate by the Environmental Professional.

Pertinent information obtained from these sources and activities is presented in relevant sections throughout this report. A list of references and resources used in this assessment is provided in **Appendix A**. Professional profiles for the designated Environmental Professional and other key personnel for this assessment are provided in **Appendix B**. Additional details pertaining to the Phase I scope of work, procedures, and associated considerations are provided in Section 9.

1.2 Site Visit and Interviews

Onterris conducted a site visit on July 17, 2026, to assess the subject property and adjoining properties. FOIA requests were completed on July 20, 2026, and an interview with UCF representatives Jonathon Bates and Bill Martin was completed on August 10, 2026, as discussed in Section 5.5.

1.3 Non-ASTM Scope of Work

Activities performed as part of this assessment which are outside the scope of the ASTM standard are described as follows:

- Onterris performed a limited evaluation of the potential for per- and polyfluoroalkyl substances (PFAS, other than PFOS and PFOA) to represent a concern for the subject property based on obvious known current and historical uses of the subject property. This did not include a thorough review of materials used/stored at the subject property or detailed activities involved in subject property operations/history, but merely a broad review of general historical and current site operations to identify those operations with obvious potential connections to the use of PFAS.

1.4 Exceptions and Deletions

Useful information from regulatory agencies pertaining to the subject property and adjoining properties was obtained from online sources, via public information requests, and from EDR, so Onterris did not conduct interviews with regulatory agency representatives.

Onterris has not identified other exceptions to, or deletions from, the ASTM standard in this Phase I.

1.5 Limiting Conditions and Significant Assumptions

Onterris did not encounter limiting conditions during this assessment and has not made significant assumptions during this Phase I other than those considerations discussed in Section 9 and listed below:

- Areas of the subject property were heavily vegetated, limiting our ability to fully observe and walk through portions of the site. While this is considered a limiting condition, based on the historical aerial photographs, site observations, and interviews with the site contact, we have assumed that these portions of the site have no history of industrial or chemical use or storage. As such, we do not believe that removal of this limiting condition (i.e., unobstructed view of and access to these areas) would substantively alter the conclusions of this report.

1.6 Data Gaps and Failures

Onterris identified the following low significance⁴ data gaps and/or failures for this Phase I:

- Onterris was unable to interview neighboring property owners or past subject property owners.

It is our opinion that these sources would not have provided information that would have substantively altered the findings of this report. Information obtained through interviews, the User, and publicly available databases are believed to address the data gaps/failures identified above, and therefore, these data gaps/failures are assumed to be of low significance.

Significant data gaps and failures were not identified for this Phase I.

1.7 Reliance

This report has been prepared for UCF. The reliance of this party is subject to the terms and conditions agreed to by and between Onterris USA, Inc. d/b/a Montrose Environmental Solutions, Inc. and UCF dated June 26, 2026, and executed July 6, 2026. This report may not be relied upon by any other

⁴ As per the ASTM standard, “significant data gaps” are those that affect the ability of the Environmental Professional to identify RECs and identify sources of information to address those data gaps. If significant data gaps are identified, it is our opinion that additional diligence or assessment (such as additional data review or physical sampling of environmental media) is required to address the data gap.

recipient, person, or entity (“other party” or “other parties”) without the written authorization of Onterris, and Onterris makes no warranties or representations to any other party. In receiving this report, other parties agree to make no claim against Onterris that relates in any way to this report, and to the fullest extent permitted by applicable law, other parties hereby release Onterris from, and will defend and hold harmless Onterris from and against, any claim, action, suit, damage, loss, award, liability, expense, cost, or fees including attorneys’ fees arising from or relating to any use or disclosure of the report or any portion thereof.

1.8 Report Expiration

In accordance with the ASTM standard, this report expires 180 days following the *earliest* of the site visit date provided in Section 1.2 and the interview date(s) and regulatory agency search dates listed in **Appendix A**. Specifically, this Phase I ESA report will expire on January 9, 2027.

2 Physical Setting

2.1 Subject Property Location

The subject property is located southeast of the intersection of North Alafaya Trail and McCulloch Road and north of Gemini Boulevard North, in Orlando, Florida. The site consists of approximately 27 acres of unimproved and undeveloped woodland with walking trails throughout.

The surrounding areas to the north, south, and west are commercially and residentially developed, while the east is undeveloped wooded land with two ponds and Lake Claire. McCulloch Road bounds the subject property to the north, followed by commercial development; Gemini Boulevard North bounds the subject property to the south, followed by university housing; and North Alafaya Trail bounds the subject property to the west, followed by commercial development and student housing.

The subject property location is depicted in **Figure 1** and **Figure 2**. A photographic log showing visual observations and neighboring properties is included as **Appendix C**.

2.2 Topography and Hydrology

Based on topographic maps and site observations, the land surface at the site is generally flat with a slight slope towards the northwest and east-northeast. The United States Geological Survey (USGS) topographic quadrangle maps indicate that the subject property gently slopes to the east, towards two water bodies and Lake Claire, with an average elevation of approximately 60-65 feet above sea level (**Figure 3**).

Topographic maps depicting the subject property and vicinity are included in **Appendix D**. Storm water features and drainage at the subject property are described in Section 6.4.2.

Information provided in EDR's Radius Map Report ("the EDR report", provided in **Appendix E**) indicates the northeastern portion of the site is located within the 100-year flood plains (as depicted in translucent teal shading in **Image 1**).

Image 1: Image of floodplains as depicted in the EDR report for Site 1 – Northern Site

The EDR report identifies federal wetlands (specifically, fresh water forested/shrub wetlands) throughout the majority of the site and state wetlands in a small area along the northeastern boundary of the subject property.

2.3 Geology and Hydrogeology

Information in the EDR report (**Appendix E**) indicates the bedrock stratigraphic unit beneath the subject property is the Ocala Limestone and the Hawthorn Group.

According to the EDR report and confirmed on the United States Department of Agriculture (USDA) Web Soil Survey (WSS) website (<https://websoilsurvey.nrcs.usda.gov/app/>), soils beneath the subject property consists of the following poorly-drained soils:

- Zolfo fine sand with 0 to 2 percent slopes;
- Smyrna-Smyrna, wet, fine sand with 0 to 2 percent slopes;
- Basinger fine sand, frequently ponded with 0 to 1 percent slopes;
- Archbold fine sand with 0 to 1, and 0 to 5 percent slopes; and
- St. Johns find sand.

Groundwater flow direction can be influenced by the presence of local wetland and surface water features, topography, geology, recharge and discharge areas, supply and injection wells, and other factors. Information provided in the EDR report suggests that shallow groundwater on site generally flows towards the east.

According to the EDR report, there are no registered United States Geologic Survey (USGS) water wells, 108 state database wells, and no oil/gas wells within one mile of the site. There are public water supply wells within the ASTM-required standard search radius for the site; however, based on the known history of the site (as discussed in Section 5), the presence of nearby public water supply wells is not considered a concern for the subject property.

3 Surrounding Properties

This section presents a discussion of surrounding properties, their current use, and relevant regulatory database listings for properties located within the prescribed search radii specified in the ASTM standard. A discussion of the historical use of surrounding properties is presented in Section 5.

3.1 Current Use of Surrounding Properties

The subject property is situated southeast of the intersection of North Alafaya Trail and McCulloch Road and north of Gemini Boulevard North.

At the time of the site visit, Onterris observed the following occupants and uses of adjoining and nearby properties:

- **North:** Starbucks; Valvoline gasoline and service station; and University Plaza (multi-tenant plaza).
- **Northeast:** Single family residences.
- **East:** Two ponds (one natural and one man-made); undeveloped, wooded land; and Lake Claire.
- **South:** A pond (man-made); Greek Housing.
- **Southwest:** BP gasoline station and associated Circle K convenience store.
- **West:** CVS; multi-tenant residential; and Weeks Plaza (multi-tenant plaza).
- **Northwest:** Multi-tenant commercial (former gasoline station) and Murphy's Oil, followed by Walmart and a church.

The locations and uses of adjoining and surrounding properties are presented in **Figure 4**. During the site reconnaissance, Onterris observed offsite monitoring wells associated with current gasoline stations (BP and Murphy's Oil) and evidence of a former gasoline station that is currently utilized as a multi-tenant commercial building. These observations were identified as potential concerns, as gasoline stations are associated with bulk fuel transfers and underground fuel storage, which can be a source of subsurface contamination resulting from spills and/or leaks. However, after a review of regulatory database records (discussed further in Section 3.2.1) and historical resources (Section 5.2), these facilities, and their associated properties, were no longer considered likely to represent a concern for the subject property.

The following sections detail the findings of the agency records search and regulatory determinations for the adjoining and surrounding properties.

3.2 Regulatory Database Listings

Regulatory information was reviewed to obtain information that might indicate the presence of hazardous and/or toxic materials at nearby properties. Environmental database records reviewed were provided in the EDR report (**Appendix E**) or accessed via online databases, as listed in **Appendix A**. Regulatory databases were searched by EDR according to the search radii prescribed in the ASTM standard. The EDR report defines acronyms for these databases and describes the nature of their purpose/use.

3.2.1 Adjoining and Surrounding Property Listings

The environmental records search identified facilities/ sites within the ASTM E1527-21 specified search distances from the subject property. Pertinent information gathered for the subject property and surrounding properties from various documents reviewed is provided in **Table 1**, along with conclusions regarding whether a reference represents a REC, HREC, CREC, business environmental risk (BER), de minimis condition, or other potential concern.

Table 1: Summary of Environmental Records Review

Map/EDR ID Number	Facility ID	Site Name	Address	Database Source	Direction and Distance (mi) from Subject Property	Findings
1 & 2	91890/195380	Valvoline Instant Oil Change/ Southern Express Lube	4302 Alafaya Trail	HAZ WASTE/ TIER 2	N/ 0.029	These listings refer to an automotive repair shop that is registered as a small quantity generator (SQG) (Photo 25). Based on review of the EDR report, there have been no reported spills or discharges for this facility, and therefore, these listings are not anticipated to represent a concern in connection with the subject property.
3-5	9502174/217831	US C-Stores Operations – Chevron/ Baywash Bikini Carwash/ University Palms	4300 Alafaya Trail	UST/ ASBESTOS/ HAZ WASTE	N/ 0.038	This facility is listed on the underground storage tank (UST) database and refers to a former gasoline station and associated car washing station located at the listed address. Based on a review of the EDR report, three unleaded gasoline USTs were installed in 1996. A review of FDEP’s Oculus Database resulted in various non-compliance-related violations reported throughout the years that the facility addressed, returning to compliance. A Closure Assessment Report (CAR) was completed for the replacement of a premium and regular unleaded piping sump in January 2015. Additionally, a Tank Closure Assessment Report (TCAR) was completed in March 2023, and Seminole County Department of Public Safety (SCDPS) approved the closure process. Based on the closure and removal of the three USTs, and the lack of reported spills or leaks, this facility is not anticipated to represent a concern in connection with the subject property.
7 & 8	74952	CVS #5152	4974 Alafaya Trail	HAZ WASTE/ RCRA-VSQG	W/ 0.043	These listings refer to a retail store registered as a very small quantity generator (VSQG) of hazardous waste. Based on review of the EDR report, there have been no reported spills or discharges for this facility, and therefore, it is not anticipated to represent a concern in connection with the subject property.
9	104562	The Proper Pipe	4650 Alafaya Trail	HAZ WASTE	SSW/ 0.051	This facility is registered as a hazardous waste generator; however, the EDR report indicates the status of this facility is “inactive” and “not a hazardous waste generator”. Therefore, this database listing is not anticipated to represent a concern for the subject property.
10-12	9701099/ FLR00014692 8	7-Eleven Inc & 7-Eleven Food Store #32301	4301 Alafaya Trail	LUST/ UST/ DWM CONTAM/ RCRA NONGEN	NW/ 0.067	This listing refers to a former gasoline station that maintained four 10,000-gallon USTs of unleaded gasoline installed in October 1997. Based on documents reviewed in Oculus, two discharge reporting forms (DRF) were filed for separate releases and were dated March 2007 and May 2018. The March 2007 release was due to a gasoline discharge from damaged overspill buckets. Site assessment and remediation for the discharge was completed between 2009 and 2016. A Site Rehabilitation Completion Order (SRCO) was approved by the Orange County Department of Environmental Protection (OCEPD) in June 2016. The May 2018 release was discovered via analytical testing during a tank closure at the facility. A Site Assessment Report (SAR) was submitted in February 2019 with a No Further Action (NFA) request, which was approved in May 2019. A monitoring well abandonment report was completed and the facility discontinued operating as a gasoline station. Based on the closed status of these releases, this facility is not anticipated to represent a concern for the subject property.
14-16	9804008	Circle K #2708955/ BP #70366	4600 North Alafaya Trail	LUST/ UST/ DWM CONTAM	SSW/ 0.078	This listing refers to a gasoline station that was constructed in 2000 and maintains four 10,000-gallon USTs of unleaded gasoline (Photo 19). Based on documents reviewed in Oculus, a DRF was filed in 2010 when evidence of soil contamination was identified during the replacement of five spill buckets in November 2008. Soil assessments were conducted and monitoring wells were installed to assess the extent of contamination. Contamination reportedly remained within the borders of the facility. An SRCO was approved by OCEPD in May 2023, releasing the facility from further obligations. During site reconnaissance, Onterris observed monitoring wells at the facility (Photo 20); however, based on the SRCO, this facility is not anticipated to represent a concern for the subject property.
18-21	9805720	Murphy USA #6914/ Murphy #5914/ Murphy Oil USA Inc	4279 Alafaya Road	UST FINDER/ UST	NW/ 0.092	This listing refers to a gasoline station in current operation since 2003. The facility maintains two 20,000-gallon USTs containing unleaded gasoline (Photo 23). Based on documents reviewed in Oculus, multiple Incident Notification Forms (INF) were reported for this facility (May 2018, September 2021, and February 2023) for alarm notifications and release sensors. The facility returned to compliance following the May 2018 INF, and a Dispenser Pan and Piping Sump Closure Assessment Report were completed in July 2023 in response to the September 2021 and February 2023 INFs. The facility returned to compliance in October 2023. As of February 2026, the facility received violations for general recordkeeping, routine maintenance, and financial assurance. During site reconnaissance, Onterris observed a monitoring well (Photo 24) at this property. However, no records of reported discharges or releases were identified for this facility; therefore, this listing is not likely to represent a concern for the subject property.

Map/EDR ID Number	Facility ID	Site Name	Address	Database Source	Direction and Distance (mi) from Subject Property	Findings
22, 28-30	ERIC_5456	Dryclean USA	4250 Alafaya Trail #128	DWM CONTAM/ ERIC WASTE/ CLEANUP	NNE/ 0.096	These listings refer to a dry-cleaning facility that began operations in November 1994. Based on records available in Oculus, the Drycleaning Solvent Cleanup Application for the facility was submitted in late 1996 and reported secondary containment structures associated with the machines on the property. However, at the time of the submittal, no spill or leak had been reported. In a Site Screening Report dated December 1996, the presence of PCE (a.k.a., "Perc" or tetrachloroethene) was identified in the soil adjacent to the drycleaning machine. PCE was used at the facility until 2001. A Site Assessment and associated SAR were completed in September 2006 and recommended NFA due to lack of evidence of remaining groundwater and soil contamination. The NFA was approved in June 2007, and a well abandonment report was submitted in October 2007. Based on the NFA determination, this facility is not anticipated to represent a concern for the subject property.
24-26	9809831/ 215189	Publix	4250 Alafaya Trail #148	AST/ HAZ WASTE/ RCRA-VSQQ	NNE/ 0.1	This facility maintains a 1,000-gallon emergency generator above-ground storage tank (AST) that has been in operation since 2003. No records have been documented for spills or leaks. The facility is also registered as a hazardous waste generator for Health and Allied Services (onsite pharmacy); however, the EDR report indicates that it is not a hazardous waste generator. Based on the nature of these listings, this facility is not anticipated to represent a concern for the subject property.
36 & 37	9803631	SCG 11950 Corporate Boulevard LLC	11950 Corporate Boulevard	LUST/ AST/ SPILLS/ DWM CONTAM/ NPDES/ TEIR 2	SW/ 0.279	This listing refers to a facility that currently maintains a 1,600-gallon emergency generator AST installed in 2000. A release of diesel fuel from the AST occurred in September 2017 and required emergency response and confirmation sampling. A DRF was filed in May 2018, and cleanup began in January 2019. An SRCO was issued for the facility in March 2022, and therefore, these listings are not anticipated to represent a concern for the subject property.
39 & 40	9502687	Siemens Energy Inc.	4400 Alafaya Trail	LUST/ AST/ UST/ DWM CONTAM	SSW/ 0.367	This listing refers to the facility's 2,500-gallon emergency generator UST, which was installed in the early 1980's and closed in 1995. Based on a review of available documents in Oculus, a DRF was filed for the facility at the time of the tank closure. A Limited Site Assessment (LSA) was submitted in October 2006 with the recommendation for an SRCO. The SRCO was granted in January 2007, and the facility remains in compliance based on publicly-available inspection reports. Based on the closed nature of the release and the distance of this property to the site, this facility is not anticipated to represent a concern for the subject property.

3.2.2 Other Nearby Property or Unmappable Listings

Other database records for nearby properties not listed in **Table 1** were also presented in the EDR report and other online data sources. However, based on the innocuous nature of these listings, the closed regulatory status of the listings, the nature of contaminants involved, the environmental media affected, the distance of these properties to the site, and/or the downgradient location of the listed properties, these listings are not expected to represent a concern for the subject property and do not need further discussion.

Additionally, the computerized geocoding technology used in EDR's database search is based on available census data and is only accurate to ± 300 feet. The EDR report provides database listings for which insufficient information is available to correctly identify the locations of the listings. These listings are reported as "unmappable" or "orphan" because their exact location cannot be determined. If unmappable listings identified in the EDR report were found to be within the ASTM-prescribed search radii, they are discussed in Sections 3.2.1 or 3.2.2 (above), Section 5.2, or it is our opinion that these listings do not need further discussion for one or more reasons listed in Section 3.2.1.

There are no orphan listings in the EDR report.

3.3 Vapor Encroachment Conditions

A vapor encroachment condition (VEC), or potential vapor encroachment condition (PVEC), can result from a release of hazardous substances or petroleum products to the environment that may have occurred at the property and/or surrounding properties. A Tier I VEC assessment was completed by Onterris using the method provided by EDR in conjunction with technical guidance documents from the United States Environmental Protection Agency (USEPA) and ASTM E2600-22 "Standard Guide for Vapor Encroachment Screening on Property Involved in Real Estate Transactions". The result of this assessment is included in **Appendix E**.

The "EDR VEC Application" provides a snapshot of the potential risk of vapor migration/encroachment associated with the surrounding properties that were identified within the EDR database. The limited screening method should not be considered a human health risk assessment nor was it intended to comply with regulatory requirements that might exist for the evaluation of vapor migration. No vapor encroachment screen can wholly eliminate uncertainty regarding the identification of VECs in connection to a site. Screening is intended to reduce, but not eliminate, uncertainty regarding whether a VEC exists in connection with a property.

Tier 1 of VEC screening applies state and federal database records to identify those sites with the potential to affect subsurface vapor conditions. Tier 1 employs a 1/3-mile (0.33 mile, or 1,760 feet) radius for releases of non-petroleum products, and a 1/10-mile (0.10 mile, or 528 feet) radius for releases of petroleum products.

The EDR VEC assessment tool did not identify database listings within these prescribed radii of the subject property.

4 Site Description and Operations

4.1 Subject Property Ownership and Real Estate Information

The subject property consists of a portion of a larger (parent) parcel that is currently owned by UCF. The parent parcel has a mailing address of 3900 Commonwealth Boulevard, Tallahassee, Florida.

Tax records for the parent parcel, accessed via the Orange County Property Appraiser (OCPA) [<https://ocpaweb.ocpafl.org/dashboard>], provide information as follows.

Parcel	Acreage (Deeded/Calculated)	Features
03-22-31-0000-00-005	1,194.20	Multiple public college zoned buildings, multi-family residences for student housing, multiple parking garages, sporting facilities and fields, and various paved asphalt.

It is important to note that the subject property comprises only the 27-acre portion of the parent parcel depicted in **Figures 1** through **4**.

4.2 Subject Property Layout

The subject property is located within UCF campus property and consists of undeveloped woodland with various walking trails utilized for outdoor recreation.

The layout of the subject property and pertinent features are depicted in **Figure 4**, and photographs taken during the site visit are provided in **Appendix C**.

4.3 Current Operations

The subject property currently operates as a recreational walking trailhead for campus students. Picnic benches and garbage cans are located throughout the trails.

5 Site and Surrounding Property History

5.1 Summary of Site and Surrounding Property History

The subject property historically has been undeveloped, wooded land with various trails throughout. No current or former structures or buildings within the site boundary are apparent.

By 1940, the adjoining properties were occupied by a pond and Lake Claire to the east, undeveloped land to the north, south, and west, and North Alafaya Trail bounding the property to the west. The stretch of East McCulloch Road north of the site was in use by 1947 but appears to have remained unpaved until at least the 1980s. Gemini Boulevard North was in use by the late 1970s and was paved in the early 1990s. By the late 1980s, development of campus housing had begun south of the site and continued into the 1990s. By the mid-1990s, University Plaza to the north, the single-family homes to the northeast, and additional retention ponds to the east and south were present. The Valvoline Station property north-adjacent to the site was constructed by 1997, and the CVS and multi-tenant residential and commercial properties to the immediate west of the site were constructed by 1999. Development of the area continued, and by 2007, the surrounding properties to the north, south, east, and west generally appeared in their current configuration.

5.2 Historical Resources Review

Onterris reviewed historical information provided in aerial photographs, topographic maps, Sanborn® fire insurance maps, and city directories (**Appendix D**), as well as other resources listed in **Appendix A**, to evaluate past uses of the site and surrounding area. Pertinent information obtained from these documents (and other resources, where warranted) is summarized in the following table:

Time Period	Subject Property	Surrounding Property
1940 (A)	The subject property appears as undeveloped, vegetated land with walking trails apparent in the south portion of the site.	The adjoining properties appear as undeveloped, vegetated land with a small naturally occurring pond and Lake Claire to the east and North Alafaya Trail to the west.
1947 (A)	Notable changes are not apparent apart from additional walking trails in the northeast portion of the subject property.	Notable changes are not apparent from the 1940 aerial photograph.
1953 (T)	The topographic map depicts the subject property as undeveloped vegetated land with an unpaved path in the northeast portion.	The topographic map depicts a roadway to the north and west, a building structure, a waterbody and Lake Claire to the east, and undeveloped land to the south.
1954 (A)	Notable changes are not apparent.	Notable changes are not apparent from the 1947 aerial photograph.
1957 (A)	The subject property appears as undeveloped, vegetated land with an	The adjoining properties appear unchanged aside from a building structure located to the east, north of the pond.

Time Period	Subject Property	Surrounding Property
	unpaved roadway in the northeast. No structures are apparent.	
1963 (A)	Notable changes are not apparent.	Notable changes to the adjoining properties are not apparent.
1969 (A)	Notable changes are not apparent.	Notable changes to the adjoining properties are not apparent.
1970 (T)	Notable changes are not depicted.	Notable changes are not depicted.
1970 (A)	Notable changes are not apparent.	The building structure north of the pond is no longer apparent.
1978 (A)	Notable changes are not apparent.	Unpaved roads to the north (McCulloch Road) and south (Gemini Boulevard North) are apparent. No other changes are apparent.
1980 (T)	Notable changes are not depicted.	Notable changes are not depicted.
1980 (A)	Notable changes are not apparent.	Notable changes to the adjoining properties are not apparent.
1989 (A)	Notable changes are not apparent.	A roadway (Corporate Boulevard) to the southwest is apparent.
1990 (A)	Notable changes are not apparent.	A retention pond is apparent north of McCulloch Road and land clearing activities are apparent south of Gemini
1993 (A)	Notable changes are not apparent.	Land clearing and construction activities are apparent north of McCulloch Road. An additional retention pond is apparent to the east, and a retention pond and building with associated parking is apparent south of Gemini Boulevard North.
1995 (A)	Notable changes are not apparent.	A multi-tenant commercial building with associated parking (University Plaza) and numerous single-family homes are apparent north and northeast of the site. Greek Housing buildings are visible south of the site.
1997 (A)	Notable changes are not apparent.	A gasoline station with an associated carwash and a building structure are apparent on the current Valvoline station property north of McCulloch Road. Additional single-family homes have been constructed to the northeast.
1999 (A)	Notable changes are not apparent.	Multiple multi-tenant residential and commercial buildings and the current CVS building are apparent west of the site. The multi-tenant commercial building northwest of the site has also been constructed.
2000 (CD)	The subject property is not identified in the city directory listings.	City directory records identify Dryclean USA (4250 Alafaya Trail) located at the multi-tenant commercial structure to the adjoining north.

Time Period	Subject Property	Surrounding Property
2002 (A)	Notable changes are not apparent.	A gasoline station (at the current BP station) southwest of the site is present.
2004 (A)	Notable changes are not apparent.	Northwest of the site, the Murphy's Oil and Walmart buildings have been constructed, and the adjacent church property has been cleared.
2005 (A)	Notable changes are not apparent.	Construction on the church property northwest of the site is apparent.
2005 (CD)	The subject property is not identified in the city directory listings.	City directory records identify Shell (4300 Alafaya Trail) and 7-Eleven (4301 Alafaya Trail) to the adjoining north-northwest and northwest, respectively.
2006 (A)	Notable changes are not apparent.	The church property northwest of the site has been fully developed.
2007 (A)	Notable changes are not apparent.	Notable changes are not apparent.
2008 (A)	Notable changes are not apparent.	Construction of a large multi-tenant commercial complex southwest of the site is underway.
2009 (A)	Notable changes are not apparent.	Construction of a large multi-tenant commercial complex southwest of the site appears generally complete.
2010 (A)	Notable changes are not apparent.	Notable changes are not apparent.
2010 (CD)	The subject property is not identified in the city directory listings.	City directory records identify Murphy USA (4279 Alafaya Trail) to the adjoining northwest. Dryclean USA was renamed to University Palms Dry Cleaner.
2012 (T)	The topographic map does not depict specific features; however, it depicts the subject property as undeveloped land.	Roadways to the north and south are depicted, and residential roadways are apparent west of North Alafaya Trail. A retention pond is depicted to the south.
2012-2014 (A)	Notable changes are not apparent.	Notable changes are not apparent.
2014 (CD)	The subject property is not identified in the city directory listings.	City directory records identify Circle K (4600 North Alafaya Trail) to the adjoining south-southwest.
2015 (T)	The topographic map does not depict specific features; however, it depicts the subject property as undeveloped land.	A retention pond is depicted to the north and east.
2015-2017 (A)	Notable changes are not apparent.	Notable changes are not apparent.
2017 (CD)	The subject property is not identified in the city directory listings.	City directory records identify Valvoline Instant Oil Change (4302 Alafaya Trail) to the north.
2018 (T)	The topographic map does not depict specific features; however, it depicts the subject property as undeveloped land.	Notable changes are not depicted.

Time Period	Subject Property	Surrounding Property
2018-2019 (A)	Notable changes are not apparent.	Notable changes are not apparent.
2021 (T)	The topographic map does not depict specific features; however, it depicts the subject property as undeveloped land.	Notable changes are not depicted.
2021-2022 (A)	Notable changes are not apparent.	Notable changes are not apparent.
2022 (CD)	The subject property is not identified in the city directory listings.	The 7-Eleven was renamed to Fast Convenient 7-Eleven.
2023 (A)	Notable changes are not apparent.	Notable changes are not apparent.
2024 (T)	The topographic map does not depict specific features; however, it depicts the subject property as undeveloped land.	Notable changes are not depicted.
2024 (CD)	The subject property is not identified in the city directory listings.	City directory records do not list 7-Eleven. Additional changes are not apparent.
2024-2025 (A)	Notable changes are not apparent.	Notable changes are not apparent.

Abbreviations:

- (A) Aerial photograph
- (CD) City directory
- (T) Topographic map

5.3 Previous Site Environmental Studies

Documentation of previous environmental assessments associated with the site were not provided by the User or identified in publicly-available resources.

5.4 FOIA Request

Freedom of Information Act (FOIA) requests were requested from OCEPD and Seminole County Public Records (SCPR) completed for the site on July 20, 2026. As a note, a public records request through OCEPD also includes a records search with the Orange County Fire Records (OCFR) department simultaneously. Therefore, a separate request for fire department records was not submitted. Additionally, OCFR includes records for Seminole County.

The FOIA requests did not provide pertinent information for the subject property or surrounding properties. FOIA documents can be provided upon request.

5.5 Interviews

An interview was conducted on August 10, 2026, with Jonathon Bates, UCF's Associate Vice President of Strategic Campus Planning, and Bill Martin, University Architect at UCF. To their knowledge, there have been no prior uses or buildings associated with the subject property. Additionally, no additional documentation associated with the subject property was provided by the site contacts.

6 Site Environmental Operations

On July 17, 2026, Onterris personnel conducted a site visit to observe the subject property for evidence of RECs or other environmental concerns, such as the presence of dumping or disposal areas, evidence of landfilling, stressed or discolored vegetation, stained soils, the presence of storage tanks or drums (or other chemical containers), monitoring wells, electrical transformers, sumps or drains, or other evidence that may suggest the presence of a release or threatened release of hazardous substances or petroleum products.

A photographic log compiled during the site reconnaissance is included in **Appendix C**. Pertinent site features are shown in **Figure 4**.

6.1 Regulatory Database Listings

The subject property was not identified in database records presented in the EDR report.

6.2 Chemical Use and Storage

No chemical usage or storage was observed on the subject property at the time of the reconnaissance, and no obvious indications of past chemical usage or storage at the site were apparent in documentation reviewed.

6.2.1 Chemical Containers and Use

No chemical containers were observed on the subject property at the time of the reconnaissance.

6.2.2 Above Ground Storage Tanks (ASTs)

No ASTs were present on the subject property at the time of the reconnaissance, and no evidence of historical ASTs at the site was apparent in documentation reviewed.

6.2.3 Underground Storage Tanks (USTs)

No evidence of current or former USTs (such as fill ports or piping) was identified during the site visit, during interviews, or in documentation reviewed for the site.

6.2.4 PFOA and PFOS

PFOA and PFOS are PFAS compounds. Currently they are the only PFAS compounds that are classified as hazardous substances under CERCLA; therefore, the potential presence of PFOA and PFOS was evaluated as part of this assessment. A review of other PFAS compounds is currently considered a non-scope item under the ASTM Standard. However, the databases and NAICS codes reviewed for PFOA and PFOS per this assessment may include other PFAS compounds.

A review of regulatory databases and North American Industry Classification System (NAICS) codes associated with PFOA and PFOS does not suggest obvious indications that these compounds are a concern for the site. No evidence of PFOA or PFOS use was observed during the site visit, during interviews, or in documentation reviewed.

6.3 Waste Management

6.3.1 Hazardous Waste

Hazardous waste is waste that poses a severe threat to human health or the environment if improperly disposed. According to the USEPA, a substance is a hazardous waste if it appears on specific lists of hazardous waste or exhibits the established characteristics of hazardous waste. Hazardous waste is regulated under the Resource Conservation and Recovery Act (RCRA).

According to databases searched by EDR, the site has not been on the RCRA database. Hazardous waste generation or storage at the site was not observed during the site visit nor suggested in interviews or documentation reviewed.

6.3.2 Regulated Non-Hazardous Waste

Regulated non-hazardous waste (i.e., used oil, asbestos, antifreeze, grinding dust, and wastewater) generation at the site was not observed during the site visit nor suggested in interviews or documentation reviewed.

6.3.3 Universal Waste

Universal waste is a classification of waste that includes “hazardous,” yet common, materials. These wastes mostly come from consumer products that contain substances hazardous to health. Universal waste cannot be disposed of in landfills. Federal regulations apply to five types of universal waste: batteries, pesticides, mercury-containing equipment, lamps, and aerosol cans.

Regulated universal waste generation at the site was not observed during the site visit nor suggested in interviews or documentation reviewed.

6.3.4 Non-Hazardous Waste

Unregulated non-hazardous waste (i.e., medical waste, industrial waste, electronic waste) generation at the site was not observed during the site visit nor suggested in interviews or documentation reviewed.

6.3.5 Wastewater

Wastewater generation at the site was not observed during the site visit nor suggested in interviews or documentation reviewed. However, what appears to be a lift station is located in the northwest

corner of the subject property. The site contacts did not know which nearby properties the lift station services, but based on its visible condition at the time of the site visit, it is not anticipated to represent a concern for the site.

6.3.6 Septic Systems

Onterris did not observe evidence of current or former septic systems at the subject property during the site visit. The UCF campus is serviced by UCF Utilities and Engineering Services (UES), which manages sanitary sewage.

6.3.7 Pits, Lagoons, Sumps, and Floor Drains

As the subject property is undeveloped, Onterris did not observe pits, lagoons, sumps or floor drains. Standing water was observed as a result of typical hydrology due to the surrounding water bodies and Lake Claire.

6.4 Water Supply and Storm Water

6.4.1 Water Use

The subject property is currently undeveloped and does not use water for domestic, process, or irrigation purposes. OCPA parcel records indicate that water supply for the parent parcel is sourced from UCF.

6.4.2 Storm Water

No storm water drains were identified during the site visit. The site is serviced by UCF UES, which also manages campus stormwater infrastructure.

6.5 Equipment and Building Materials

6.5.1 Polychlorinated Biphenyls (PCBs)

Onterris observed pole-mounted transformers bounding the subject property to the north and west (**Photo 7 & 14**). The ground surface underlying the transformer poles is paved and appeared in adequate condition based on surficial observations. No evidence of a release of dielectric fluid was observed.

6.5.2 Oil-Containing Equipment

Onterris did not observe oil-containing equipment on the subject property.

6.5.3 Air Emissions

Onterris did not observe evidence of air emissions generated at the subject property.

6.5.4 Heating, Ventilation, and Cooling (HVAC) Systems

Onterris did not observe HVAC equipment on the subject property.

6.5.5 Asbestos

Occupational Safety and Health (OSHA) standards in Code of Federal Regulations (CFR) 1910.1001 and 1910.1101 consider spray-applied surfacing materials, thermal insulation systems, and vinyl flooring materials installed in 1980 or earlier as “presumed asbestos-containing materials” (presumed ACM), and installation of such materials containing asbestos is banned in the United States. The installation of roofing or fireproofing materials containing asbestos is not currently banned in the United States.

The subject property is currently undeveloped; therefore, no asbestos-containing material was observed during the site reconnaissance.

6.5.6 Lead-Based Paint

In 1978, the federal government banned consumer use of lead-based paint (LBP) in homes and public buildings; however, the use of LBP in industrial buildings has not been banned.

The subject property is currently undeveloped; therefore, no LBP was observed during the site reconnaissance.

6.6 Other Observations

6.6.1 Stained Soil or Pavement

Onterris did not observe stained soil or pavement at the time of site reconnaissance.

6.6.2 Odors

No odors indicative of a release of hazardous or petroleum substances were apparent within the subject property at the time of reconnaissance.

6.6.3 Stressed Vegetation

Onterris did not observe indications of stressed vegetation at the time of site reconnaissance.

6.6.4 Disturbed Land

Onterris did not observe evidence of disturbed land outside of the walking trails at the time of site reconnaissance.

7 User-Provided Information

Onterris contacted the User for information related to the site. Jonathan Bates, UCF's Associate Vice President of Strategic Campus Planning, completed the questionnaire. Relevant information provided by the User is discussed in the applicable sections of this report or in the following table, which lists the "additional inquiries" the User must make to comply with the ASTM standard:

Request	Information Provided	User Information Provided
Environmental Cleanup Liens ⁵	Title search or other information pertaining to environmental cleanup liens against the subject property	The User indicated a check for environmental liens currently recorded against the site indicated no liens.
Activity and Use Limitations (AULs) ⁵	May include engineering controls (e.g., slurry walls, caps) and land use restrictions or institutional controls (e.g., deed restrictions, covenants)	The User indicated a search of recorded land title records indicated no AULs for the site.
Common Knowledge	Common knowledge about specific chemicals, possible contamination, or past use of the site and nearby area	The User had no common knowledge other than that already discussed in other sections of this report.
Specialized Knowledge	Personal knowledge or experience related to the site or nearby properties based on professional experience or knowledge of the subject property	The User had no specialized knowledge other than that already discussed in other sections of this report.
Obvious Indicators	Knowledge of obvious indicators of past or present spills, stains, releases, cleanups on or near the site	The User had no knowledge of obvious indicators of past releases other than that already discussed in other sections of this report.
Fair Market Value	Devaluation of the fair market value of the site in association with environmental conditions at or under the property.	The User was not aware of a devaluation of the fair market value of the subject property.

⁵ Onterris did not perform an independent title search or evaluation of environmental cleanup liens or AULs for the site.

8 Findings and Conclusions

Onterris has performed a Phase I ESA of the subject property in conformance with the scope and limitations of ASTM Standard E1527-21. Any exceptions to, or deletions from, the ASTM standard are described in Section 1.4 of this report. Additional limitations and considerations are described in the next section.

Evidence of RECs and other findings revealed during this assessment in connection with the subject property are provided in the Executive Summary at the beginning of this report. Professional profiles for the designated Environmental Professional and other key personnel to this assessment are provided in **Appendix B**.

9 Additional Considerations

9.1 ASTM Definitions

The ASTM Standard Practice E1527-21, which meets the requirements of the All Appropriate Inquiries (AAI) Final Rule (40 CFR Part 312), defines key terms used in this Phase I as follows:

Recognized Environmental Conditions (REC): “...(1) the presence of hazardous substances or petroleum products in, on, or at the subject property due to a release to the environment; (2) the likely presence of hazardous substances or petroleum products in, on, or at the subject property due to a release or likely release to the environment; or (3) the presence of hazardous substances or petroleum products in, on, or at the subject property under conditions that pose a material threat of a future release to the environment.”

Historical REC (HREC): “...a previous release of hazardous substances or petroleum products affecting the subject property that has been addressed to the satisfaction of the applicable regulatory authority or authorities without subjecting the subject property to any controls (for example, activity and use limitations or other property use limitations). A historical recognized environmental condition is not a recognized environmental condition... the environmental professional shall review reasonably ascertainable documentation and relevant data that demonstrate that unrestricted use criteria established by the applicable regulatory authority or authorities was met. A past release that qualified as a historical recognized environmental condition may no longer qualify as a historical recognized environmental condition if new conditions or information have been identified such as, among other things, a change in regulatory criteria or a subsequently identified migration pathway that was not previously known or evaluated.”

Controlled REC (CREC): “...recognized environmental condition affecting the subject property that has been addressed to the satisfaction of the applicable regulatory authority or authorities with hazardous substances or petroleum products allowed to remain in place subject to implementation of required controls (for example, activity and use limitations or other property use limitations)... A past release that previously qualified as a controlled recognized environmental condition may no longer constitute a controlled recognized environmental condition at the time of the Phase I Environmental Site Assessment if new conditions or information have been identified such as, among other things, a change in regulatory criteria, a change of use at the subject property, or a subsequently identified migration pathway that was not previously known or evaluated.”

Business Environmental Risk (BER): a risk which can have a material environmental or environmentally driven impact on the business associated with the current or planned use of commercial real estate, not necessarily related to those environmental issues required to be investigated in this practice.

De Minimis Condition: “...a condition related to a release that generally does not present a threat to human health or the environment and that generally would not be the subject of an enforcement

action if brought to the attention of appropriate governmental agencies. A condition determined to be a de minimis condition is not a recognized environmental condition nor a controlled recognized environmental condition.”

Data Gap: “...a lack of or inability to obtain information required by this practice despite good faith efforts by the environmental professional to gather such information. Data gaps may result from incompleteness in any of the activities required by this practice, including, but not limited to site reconnaissance (for example, an inability to conduct the site visit), and interviews (for example, an inability to interview the key site manager, regulatory officials, etc.)”

Data Failure: “...a failure to achieve the historical research objective...even after reviewing the standard historical sources ... that are reasonably ascertainable and likely to be useful...”

User: “...the party seeking to use Practice E1527 to complete an Environmental Site Assessment of the property... A user may include, without limitation, a potential purchaser of subject property, a potential tenant of subject property, an owner of the subject property, a lender, or a property manager. A user seeking to qualify for an LLP to CERCLA liability, or a user that is an EPA Brownfield Assessment and Characterization grantee, has specific obligations for completing a successful application of this practice...”

Additionally, the ASTM standard describes a key term used in this report as follows:

Limiting Conditions: Limiting conditions include those “limitations imposed by physical obstructions such as adjacent buildings, bodies of water, asphalt, or other paved areas, and other physical constraints (for example, snow, rain, flooding, etc.)...” Limiting conditions may also include “user-imposed constraints...”

9.2 Procedures and Methodology

Unless otherwise specified elsewhere in this report, the following is an overview of the activities performed by Onterris during the completion of this assessment. The information and documents provided by the various sources consulted for this Phase I are assumed to be reliable unless otherwise noted, and Onterris did not conduct an independent verification of information and/or documents reviewed. Onterris cannot and does not warrant or guarantee that the information provided by these other sources is accurate or complete. The methodologies of this Phase I are not intended to produce all-inclusive or comprehensive results, but rather to provide the client with information relating to the subject property.

9.2.1 User and Site Requests for Information

Onterris requested pertinent site documents from both the User and site contact or owner, including but not limited to prior environmental reports and assessments, permits, licenses, inspections, registrations, agency correspondence, site maps, and other records and data related to environmental operations at the subject property. Onterris also requested from the User the specific

information discussed in Section 7. Onterris did not perform an independent search for environmental liens or AULs.

9.2.2 Site Visit

The subject property was evaluated through visual observations of surface conditions at the time of the site visit. The purpose of the visit was to note the general condition of the property and identify signs of potential environmental impacts, including but not limited to such factors as improperly managed waste or chemicals, the presence of underground storage tanks, observation of stained soils or distressed vegetation, etc.

Onterris observed the site exterior by walking (where accessible) and visually scanning the perimeter of site buildings, the approximate perimeter of the site, paved and/or unpaved onsite pathways/roadways to identify areas of interest (e.g.: areas of chemical/material storage, equipment staging, production activities, machinery operation, chemical use, surface staining, past releases, etc.). Onterris observed the interior portions of the site by entering key rooms and areas (as led and permitted by the site contact and/or personnel) to identify areas of interest. Unless prohibited by the site, deemed unsafe, or otherwise described in Section 1.5, Onterris approached and/or entered identified areas of interest on the exterior and interior portions of the property for closer observation. If escorted by a representative of the site during the visit, Onterris depended, in part, on the escort to make Onterris aware of the existence of areas of interest at the site.

If the subject property includes large areas of undeveloped land, Onterris visually observed the exterior portions of the property for areas of interest from established pathways or roadways. If access to or visibility of exterior portions of the property were limited by the presence of dense vegetation or other factors, or if identified areas of interest were inaccessible, this is discussed in the limitations or data gaps sections of this report (respectively, Sections 1.5 or 1.6).

As permitted by the site and deemed appropriate by the Environmental Professional, Onterris also used the site visit as an opportunity to interview the site contact, to observe adjacent properties (as described in Section 9.2.5) and available personnel and to review and/or retrieve relevant site documents not previously provided by the site, User, or agency databases.

Unless otherwise specified in Section 1.3, no sampling or analytical testing of environmental media was performed for this Phase I.

9.2.3 Interviews

Onterris interviewed the User and site contact regarding site history, environmental operations, neighboring properties, and other relevant information. As deemed appropriate by the Environmental Professional and permitted by the site and Client, Onterris also may have interviewed the site owner, other site personnel or occupants, neighboring properties, and/or other persons currently or previously associated with the site (if available). If deemed appropriate by the Environmental Professional to supplement publicly available records, Onterris also may have interviewed

representatives of regulatory agencies. Findings of this Phase I which relied on information based on interviews may be limited to the information gained from interviewing persons who claimed to have knowledge of the subject property, and an independent verification of this information was not performed. Persons interviewed for this assessment and their contact information is provided in **Appendix A**.

9.2.4 Review of the Site History

Historical sources were consulted to develop a history of previous property use that may indicate environmental concerns. Onterris attempted to identify obvious uses of the property from the present back to its first developed use or 1940, whichever is earlier. The ASTM standard requires an identification of historical documents and records from the time the subject property contained structures or from the time the property was first used for residential, agricultural, commercial, industrial, or institutional purposes. The sources consulted during this Phase I included interviews with knowledgeable persons, a review of previous documents listed in **Appendix A**, and those sources provided in **Appendix D**. Only those standard historical sources considered necessary by the Environmental Professional and reasonably ascertainable were reviewed.

9.2.5 Evaluation of Adjacent Properties

To evaluate their potential to represent a concern for the subject property, Onterris observed adjoining properties as possible from the site and public roadways and rights-of-way. Unless otherwise specified, Onterris did not visit offsite properties. If the site is located within a larger multi-tenant property, portions of the larger property not part of the site that is the subject of this Phase I were considered "offsite". If available, Onterris interviewed representatives of adjoining properties only if deemed warranted by the Environmental Professional. The past use of adjacent properties was assessed only to the extent that this information was revealed during the course of the historical review conducted on the subject property.

9.2.6 Agency Record Review

To identify current and/or past environmental conditions with the potential to represent a concern for the subject property, Onterris conducted a review of relevant regulatory agency records related to the site and nearby properties. These records were retrieved via publicly available databases and provided by the third-party database search company identified in Section 1.1. As deemed appropriate by the Environmental Professional, telephone calls were made to regulatory agencies to supplement information retrieved from publicly available online databases. No in-person visits to regulatory agencies were made unless otherwise indicated in **Appendix A**.

Onterris reviewed the third-party database report and conducted a search of regulatory databases for information pertaining to the site. The third-party database report (**Appendix E**) summarizes the ASTM-required databases searched and notes if the subject property or nearby properties identified within the ASTM-prescribed search radii are listed in those databases. Only listings deemed noteworthy due to the nature of the listing and/or other conditions are discussed in the applicable

sections of this report. A search of regulatory databases for information pertaining to neighboring properties was conducted only if warranted based on potential concerns identified in the third-party database report review, interviews, or other sources reviewed related to the subject property.

9.3 ASTM Limitations

The innocent landowner, contiguous owner, and prospective purchaser defenses to liability under the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA) require that a person or entity acquiring property conduct an All Appropriate Inquiry (AAI, as described in 40 CFR. 312) with respect to the subject property.

To satisfy the AAI requirement, the ASTM E1527-21 standard requires the application of professional judgment and science to information obtained, as well as subjective interpretation using the discretion of the designated Environmental Professional. Such conclusions presented in this report are based on the information currently available to Onterris within the limitations of existing data, identified data gaps, and the scope of work, budget, and schedule authorized by the Client. The ASTM standard identifies several principles governing the limitations of the ASTM-compliant Phase I. These include, but are not limited to the following principles:

- The Phase I is intended to reduce, but not eliminate, uncertainty regarding the potential for RECs in connection with a property, and the ASTM standard recognizes reasonable limits of time and cost.
- The Phase I is not an exhaustive assessment of the subject property. The cost and time associated with the Phase I is not intended to outweigh the reduction of uncertainty about unknown conditions resulting from additional information.
- Not every property warrants the same level of assessment. The level of effort expended should be guided by the type of property, the expertise and risk tolerance of the User, and the information developed during the course of the assessment.
- The performance of an AAI should be based on the reasonableness of judgments made at the time and under the circumstances in which they were made.
- The viability of a Phase I continues up to 180 days following the earliest date of completion of any required component of the Phase I ESA. If not more than one year has passed since completion of a required component of the Phase I, the Phase I may be updated as described in the ASTM standard.
- If the User changes during the period within which the Phase I is viable, the new User must also satisfy the User responsibilities identified in the ASTM standard. The new User must also seek written authorization of the right to rely on the report.

Additionally, the liability defenses prescribed under CERCLA require that the User, following completion of the transaction, maintain a continuing obligation to not impede the integrity and effectiveness of AULs, to take reasonable steps to prevent releases, and to comply with legally required release reporting obligations. Onterris makes no warranties, expressed or implied, that this

Phase I assessment will qualify the User for the innocent landowner, contiguous property owner, or prospective purchaser defense to liability (collectively referred to as “landowner liability protections” or “LLPs”) under CERCLA.

9.4 Other Limitations

The conclusions presented in this report represent our professional judgment based on the information made available to us during the course of this assessment and are true and correct to the best of our knowledge as of the date of this report. Onterris assumes no responsibility or liability for errors in the information provided to Onterris for this Phase I or developments resulting from situations outside the scope of this project. This assessment was performed in accordance with generally accepted practices of the profession undertaking similar studies at the same time and in the same geographical area. The findings and conclusions presented in this report are based on the conditions encountered at the time this Phase I was conducted and should not be considered representative of future conditions.

Conclusions provided in this report do not constitute legal advice and should not be relied upon in any way for legal interpretations. State-specific regulations related to property transfer (or ownership changes) may apply to the proposed transaction. Costs related to compliance with these State requirements were not included in this Phase I. Consultation with an attorney and/or certified accountant should be made with respect to any legal or accounting matters, or items that require such interpretation, under any law, regulation or contract.

Appendix B – Professional Profiles

Sara Gozdor

Senior Scientist

sagozdor@montrose-env.com

Orlando Office

Cell: 516-322-5323

Professional Experience

Sara Gozdor has over 20 years of experience in managing contaminated sites and providing environmental services for the oil and gas, power, and manufacturing sectors. As an environmental consultant, she is skilled in site characterization, due diligence, environmental compliance, site decommissioning, project management, and various other environmental support services.

Sara's expertise is in the conditional closure of contaminated sites regulated under the Florida Department of Environmental Protection's (FDEP) Waste Cleanup program. She has supported several large and high-profile projects, offering environmental services to multiple Fortune 500 companies across the oil and gas, power, and manufacturing industries. She has also managed and supported multiple environmental projects under various state and federal programs for the United States Navy, Air Force, and Army Corps of Engineers.

Expertise

Sara specializes in project management, people management and staff development, due diligence and transaction advisory services, contaminated site management, preparation of restrictive covenant documents for conditional site closure, development of conceptual site models for sites with contaminated soil/groundwater, EHS compliance reviews and audits.

Education & Training

BA, Environmental Studies, Adelphi University

AA, Liberal Arts, Nassau Community College

Relevant Project Experience

Contaminated Site Management and Due Diligence Projects

40-Site Due Diligence Assessment Portfolio – Ready-Mix Concrete Manufacturing Company – U.S. Sara managed a 40-site due diligence project entailing forty ASTM E1527-21-compliant Phase I Environmental Site Assessments for a global cement and ready-mix concrete manufacturing company. The 40 sites were located in 11 states in the Eastern United States and the Gulf Coast, and the project scope included site visits and individual reports for each site. The project was completed on an expedited schedule and was supported by 15 Montrose professionals.

Multi-Site Due Diligence and Contaminated Site Assessment to Closure - Fortune 500 Manufacturing Company - Clearwater, FL. Sara managed a multi-site acquisition project to support a large expansion of a transformer manufacturing facility. Sara initially provided due diligence support to assess the extent of metals impacts in soil at these properties and to evaluate potential options for closure of an acquired site with known chlorinated solvent impacts in groundwater. She managed Site Assessments for the acquired sites and prepared and executed a Remedial Action Plan at one of the sites. Remedial Action included the redistribution and reuse of impacted soil at the site and the subsequent installation of an asphalt pavement cap as an engineering control. Sara assisted with the preparation and execution of restrictive covenant documents, and the sites were subsequently issued a Conditional Site Rehabilitation Completion Order.

Contaminated Site Assessment to Closure - Metal Fabrication Company - Jacksonville, FL. Sara managed an environmental site assessment of an approximately 10-acre, 11-parcel metal fabrication facility with discrete metal impacts in soil, petroleum-related contaminants associated with a former buried tank, and PCB impacts in soil associated with leaking transformers. The site is also included within a larger CERCLA site associated with impacts to soil from incinerator ash. A ROD mandates the City to remediate incinerator ash-related impacts. Sara managed a Site Assessment of soil and groundwater impacts, natural attenuation groundwater monitoring, and excavation and disposal of impacted soil areas. Sara subsequently negotiated with the City and State to allow the remaining impacted soil and groundwater to be controlled via institutional and engineering controls. Institutional controls include a restrictive covenant and existing institutional controls under the City's incinerator ash program. The restrictive covenant has been approved and recorded with the County, and the Site has been granted a Conditional Site Rehabilitation Completion Order.

Groundwater Investigation of Leaking Spent Fuel Pools - Nuclear Power Plant - Buchanan, NY. Sara played several key roles in an extensive and politically sensitive groundwater investigation at a nuclear power plant in New York. The purpose of the investigation was to address tritium and strontium-90 releases from spent fuel pools into groundwater. This project involved installation, sampling, and hydraulic conductivity testing of an extensive monitoring well network, execution of a dye tracer test, deployment of multilevel well sampling systems, development of a conceptual site model, frequent meetings and negotiations with the State and Nuclear Regulatory Commission (NRC), and several public meetings and demonstrations. Following the investigation phase of the project, Sara participated in the development, planning, and execution of a long-term groundwater monitoring program, serving as the program's project manager.

Natural Attenuation Monitoring to Closure – Vacant Property - Tampa, FL. Sara assisted with the completion of a Site Assessment and managed a natural attenuation monitoring project at a 64-acre undeveloped property contaminated by dredge spoils from the historic construction of the Tampa Bypass Canal. Constituents of concern included lead, arsenic, manganese, and several polyaromatic hydrocarbons. A land developer purchased the property from the County for a reduced price and agreed to perform a voluntary assessment and cleanup of the property prior to development. The Site Assessment delineated impacts in soil on site, and groundwater impacts were found to extend offsite. During the course of natural attenuation monitoring, the lateral extent of the plume retreated to within the property boundaries. Sara prepared and executed a restrictive covenant document prohibiting groundwater use and restricting the property to commercial/industrial use. FDEP subsequently issued a Conditional Voluntary Cleanup Completion Order for the site.

Assessment of Chlorinated VOCs in Groundwater from an Offsite Source - Fortune 500 Cosmetics Company - Jacksonville, FL. Sara was retained to define the source of chlorinated solvents identified in groundwater on the Client's property, which had a long industrial history, but no known releases. The property was located immediately downgradient of a property known to be contaminated with chlorinated solvents. However, the client was compelled by the state to assess groundwater because parent compounds had been detected, which were believed to have been removed from the neighboring property. The client was also concerned that it would be compelled to delineate/remediate groundwater impacts potentially migrating onto an abutting residential neighborhood. Sara and her team utilized EQulS to manage and query decades of historical hydrogeologic and analytical data, and employed a customized web-based GIS system to refine the conceptual site model. Sara and her team identified temporal variability in chemical fingerprints, which clearly demonstrated that the contamination on the client's property was nearly identical to that found on the abutting upgradient property. The project team's evaluation of geological stratigraphy demonstrated how well screen placement affected the

groundwater chemistry data and how incorrect categorization of some well screens (i.e., shallow versus deep) made a significant difference in the resultant interpretation. Ultimately, the state agreed with the redeveloped conceptual site model and released the Client from responsibility for assessment and cleanup.

Groundwater Protection Program Evaluation - Nuclear Power Plant - Western MI. Sara performed several 5-year evaluations of the Groundwater Protection Program employed by a nuclear power plant to assist with the facility's compliance with NEI-07-07. The initial assessment involved the development of a conceptual site model of groundwater flow at the facility and an evaluation of the suitability of the Site's monitoring well network. Sara also performed a well integrity assessment and has managed well refurbishment and installation activities for the facility.

Due Diligence and Contaminated Site Assessment to Closure - Marina and Resort, Islamorada, FL. Sara managed a due diligence, Site Assessment, and Natural Attenuation Monitoring project at an active resort and marina in the Florida Keys. The property features a gasoline filling station and multiple fueling dispensers along the marina, which may have contributed to localized petroleum impacts in the groundwater. Assessment and Natural Attenuation Monitoring activities have been completed, and Sara is pursuing conditional closure of the Site using institutional controls (i.e., a deed restriction).

Electrical Substation Retirement Assessment and Remediation - Fortune 500 Energy Company - Live Oak and Jasper, FL. Sara managed the assessment and remediation of two former electrical substations in north-central Florida, in accordance with the Mineral Oil Dielectric Fluid (MODEF) program requirements. Assessment activities identified the presence of petroleum and PCBs impacts in soil and concrete. Impacted material was subsequently characterized and removed.

Contaminated Site Remediation to Closure - Former Chemical Manufacturing Facility - Lake City, FL. Sara managed a remedial Operation & Maintenance (O&M) project that utilized an air sparge/soil vapor extraction (AS/SVE) system to remediate a historic petroleum release at a former chemical processing plant. After several years of operation, the lateral extent of the BTEX plume had substantially retreated, and the system was shut down. After several years of post-active remediation monitoring, xylenes were the only constituents of concern detectable above Groundwater Cleanup Target Levels in a single well. Sara's team subsequently performed a limited soil assessment to confirm that historic soil removal efforts and AS/SVE operation had successfully abated all soil impacts. Sara prepared and executed a deed restriction that limited the property to industrial/commercial use and restricted shallow groundwater use. The Site was subsequently issued a Site Rehabilitation Completion Order.

Wastewater Effluent Risk Analysis - Oilfield Chemical Production Company, Odessa, TX. Sara performed overland runoff calculations for several aerobic septic systems at an oilfield chemical processing plant in order to determine if effluent from the systems was affecting (or could potentially affect) nearby wetlands.

Contaminated Site Assessment to Closure - Plastics Manufacturing Facility - Hollywood, FL. Sara managed a site assessment and remediation project involving a leaking oil-water separator that had resulted in petroleum impacts to soil at a plastic container manufacturing plant. Over an unknown period, the release seeped through the building wall onto an unpaved, narrow area where overhead equipment and conduits rested on multiple vertical supports/footers wedged between the building and the property fence. The assessment delineated soil impacts in the area and was followed by an interim source removal, during which several areas of impacted material had to be excavated by hand due to the proximity of equipment supports and building

foundations. Removal efforts were successful in completely abating impacts, and FDEP subsequently issued an unconditional Site Rehabilitation Completion Order.

Groundwater and Soil Assessment - Former Pesticides Manufacturing Plant - Tampa, FL. Sara orchestrated and managed a groundwater assessment and partial soil assessment of a former pesticide plant for which site rehabilitation responsibility currently lies with a Fortune 500 energy company that does not own or operate the property. Constituents of concern in groundwater include organochlorine pesticides and a number of naturally occurring metals that have leached out of the soil due to the low pH of the groundwater. The groundwater plume extends under properties to the immediate east, west, and south and has migrated at least one-third mile from the presumed source of impacts. Several other consulting companies had previously worked on the project but had not yet completed the groundwater assessment due to numerous data gaps and unexplained data/observations. Sara and her team developed a conceptual site model that accounted for these gaps, eliminated the need to install several additional onsite and offsite wells, and identified background conditions that precluded the need for additional delineation in some areas.

Oil & Gas Industry Projects

Soil Assessment and Interim Soil Removal - Crude Oil Pipeline Abandonment – Southeast, FL. During the abandonment of an inactive crude oil pipeline within the FDOT right-of-way (ROW) in southeast Florida, a legacy pipeline release to soil within the ROW and a neighbouring property was discovered. Following some limited assessment work, Sara served as the regulatory expert on the project for an interim soil removal effort in order to meet the requirements of FDEP's Waste Cleanup program. Interim soil removal activities included the excavation of source material below the water table, necessitating dewatering. Nearly 120,000 gallons of dewatering effluent were treated and discharged under permit onto the Site. Approximately 13,000 tons of impacted soil were removed and transported off-site for disposal as non-hazardous petroleum waste. Due to the nature in which confirmatory sampling was performed, the data collected during the removal effort effectively satisfied FDEP's requirements for completion of a Site Assessment for impacted soil. Efforts to complete a groundwater assessment are currently in the planning stages.

Keystone XI Pipeline Supplemental Environmental Impact Study Support - U.S. Department of State. Sara assisted with the preparation of a supplemental environmental impact study (SEIS) for a crude oil pipeline, which included an assessment of risk and effects of potential spills. The assessment included evaluating historical PHMSA data by pipeline elements and conducting screening-level modeling of crude oil or diluted bitumen overland flow and groundwater flow spills. The assessment also identified potential receptors within potential spill zones.

Deepwater Horizon Spill Response Site Decommissioning - U.S. Gulf Coast. Sara prepared reports documenting the decommissioning and decontamination of hundreds of Gulf Coast spill response and support sites related to a large offshore oil spill.

Crude Oil Transportation Alternatives Analysis - Upstream Oil & Gas Company. Sara assisted with an assessment of oil spill and injury/fatality incident data to compare alternative modes of transportation for crude oil. The assessment included a frequency analysis of rail, barge, tanker, truck, and pipeline modes, and evaluated spill volume distribution to assess mode safety records and potential severity of a release.

Barge Transport Diesel Spill Risk Analysis - Upstream Oil & Gas Company – Alaska. Sara assisted with an assessment of oil spill incident data for barge traffic on the Kuskokwim River, Alaska. The assessment was part of

a risk assessment to evaluate the frequency and consequences of barge oil spills along the Kuskokwim River, Alaska. The frequency analysis of barge spills included spill volume distribution, locations, and cause in comparison to nationwide incident data.

Air Emissions Permitting - Upstream Oil & Gas Facilities - Southeastern U.S. Sara performed emissions calculations and assisted in the preparation of air emissions permits for multiple oil and gas sites for a global upstream oil and gas company.

Equipment/Asset Inventory Data Management - Global Upstream Oil and Gas Company - Southeastern U.S. Sara provided data management services to manage and inventory thousands of oil and gas sites for a global oil and gas exploration and production company.

EHS Compliance and Support Projects

Facility Closure and Decommissioning -Former Transformer Remanufacturing Facility - Bradenton, FL. Sara provided environmental compliance and support services for the decommissioning of a transformer remanufacturing facility operated by a Fortune 500 company and the return of the facility to the property owner. Activities included the performance of a PCB assessment, which involved collecting PCB wipe and oil samples from hundreds of pieces of equipment and facility surfaces. Sara coordinated and supervised the industrial cleaning of the facility, ensuring the proper management and characterization of associated solid waste and wastewater generated. She also facilitated the transfer of ownership/registration of onsite petroleum tanks, closure of several operations permits, and notification of closure to government authorities.

On-site EHS Support - Phosphate Fertilizer Plant - West Central, FL. Sara provided one year of on-site EHS support at a phosphates concentrates manufacturing facility for a fertilizer producer in west-central Florida. Sara served as a full-time extension of the facility's EHS team, providing services including, but not limited to, environmental permit review/management, annual environmental reporting, development of EHS training programs and reporting procedures, development of H&S Plans, and contaminated Site management.

Chinese Drywall Litigation Support - Multiple Residential Property Developers - Locations Throughout FL. Sara provided investigative and environmental support services for legal counsel representing multiple residential property developers involved in Chinese drywall litigation. This involved assessing thousands of residential homes throughout Florida, collecting, tagging, cataloguing, documenting, and warehousing thousands of items of evidence.

EHS Auditing Program - Fortune 500 Aerospace and Defense Company - Locations Worldwide. Sara performed and organized EHS audits as part of an ongoing auditing program for a global Fortune 500 company involved in the research, development, and production of combat and defence systems.

Due Diligence and Indoor Air Assessment - Property Management Company - New York, NY. Following the completion of Phase I and II activities, which identified several large, abandoned underground heating oil tanks, Sara conducted an indoor air quality assessment for two New York City multi-tenant apartment buildings. This assessment included the collection of ambient and indoor air samples, as well as a comprehensive chemical inventory of the buildings.

Asbestos Exposure Assessment - Fortune 500 Food Products Company - East-Central FL. Sara managed an asbestos exposure assessment for a feed mill facility operated by a global producer of food products. This project included asbestos analysis of settled dust samples and personal air monitoring samples for facility workers.

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

EXECUTIVE SUMMARY

DESCRIPTION

The LightBox City Directory Report is designed to assist environmental professionals in evaluating potential liabilities on select properties resulting from past activities. The report includes a search of available business directory data at approximately five-year intervals.

SOURCES

Through agreements with major city directory publishers, including Cole Information, InfoUSA, and Bresser, as well as our own collections (Haines & Stewart), the LightBox City Directory Report offers comprehensive national coverage.

LightBox is authorized to reproduce and redistribute all works featured in this report. The purchaser of this LightBox City Directory Report may include it in their final report(s).

This report includes a search of the following sources:

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by Onterris were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

Certified Sanborn Results:

Certification # 7801-4344-8E5A

PO # PO PENDING

Project 3 Undeveloped UCF Properties

UNMAPED PROPERTY

This report certifies that the complete holdings of the Sanborn Library, LLC collection have been searched based on client supplied target property information, and fire insurance maps covering the target property were not found.

Sanborn® Library search results

Certification #: 7801-4344-8E5A

The Sanborn Library includes more than 1.2 million fire insurance maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow and others which track historical property usage in approximately 12,000 American cities and towns. Collections searched:

- ☒ Library of Congress
- ☒ University Publications of America
- ☒ EDR Private Collection

The Sanborn Library LLC Since 1866™

Limited Permission To Make Copies

Onterris (the client) is permitted to make up to FIVE photocopies of this Sanborn Map transmittal and each fire insurance map accompanying this report solely for the limited use of its customer. No one other than the client is authorized to make copies. Upon request made directly to an EDR Account Executive, the client may be permitted to make a limited number of additional photocopies. This permission is conditioned upon compliance by the client, its customer and their agents with EDR's copyright policy; a copy of which is available upon request.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E1527 - 21), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E2247 - 23), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E1528 - 22) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property. Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

EXECUTIVE SUMMARY

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal RCRA generators

RCRA-VSQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Very small quantity generators (VSQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

A review of the RCRA-VSQG list, as provided by EDR, and dated 06/07/2026 has revealed that there are 4 RCRA-VSQG sites within approximately 0.25 miles of the target property.

Lists of state and tribal landfills and solid waste disposal facilities

SWF/LF: The Solid Waste Facilities/Landfill Sites records typically contain an inventory of solid waste disposal facilities or landfills in a particular state. The data come from the Department of Environmental Protection's Facility Directory (Solid Waste Facilities).

A review of the SWF/LF list, as provided by EDR, has revealed that there is 1 SWF/LF site within approximately 0.5 miles of the target property.

Lists of state and tribal registered storage tanks

UST: The Underground Storage Tank database contains registered USTs. Shortly after the September 11 event, the DEP was instructed to remove the detail about some of the storage tank facilities in the state from their reports. Federal-owned facilities and bulk storage facilities are included in that set.

A review of the UST list, as provided by EDR, has revealed that there are 4 UST sites within approximately 0.25 miles of the target property.

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 06/07/2026 has revealed that there are 3 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

UST FINDER RELEASE: US EPA's UST Finder data is a national composite of leaking underground storage tanks. This data contains information about, and locations of, leaking underground storage tanks. Data was collected from state sources and standardized into a national profile by EPA's Office of Underground Storage Tanks, Office of Research and Development, and the Association of State and Territorial Solid Waste Management Officials.

A review of the UST FINDER RELEASE list, as provided by EDR, and dated 11/21/2025 has revealed that there are 4 UST FINDER RELEASE sites within approximately 0.5 miles of the target property.

UST FINDER: EPA developed UST Finder, a web map application containing a comprehensive, state-sourced national map of underground storage tank (UST) and leaking UST (LUST) data. It provides the attributes and locations of active and closed USTs, UST facilities, and LUST sites from states and from Tribal lands and US territories. UST Finder contains information about proximity of UST facilities and LUST sites to: surface and groundwater public drinking water protection areas; estimated number of private domestic wells and number of people living nearby; and flooding and wildfires.

A review of the UST FINDER list, as provided by EDR, and dated 11/21/2025 has revealed that there are 4 UST FINDER sites within approximately 0.25 miles of the target property.

MURPHY USA #6914	4279 ALAFAYA RD	NW 0 - 1/8 (0.092 mi.)	E18	92

E MANIFEST: EPA established a national system for tracking hazardous waste shipments electronically. This system, known as "e-Manifest," will modernize the nations cradle-to-grave hazardous waste tracking process while saving valuable time, resources, and dollars for industry and states.

A review of the E MANIFEST list, as provided by EDR, and dated 06/07/2026 has revealed that there are 4 E MANIFEST sites within approximately 0.25 miles of the target property.

EXECUTIVE SUMMARY

HAZ WASTE: The records in this data set are generated by county SQG Assessment, Notification and Verification Programs on-site surveys (see 403.7225 FS). The waste records are wastes observed during county inspections. Even though this state program targets SQGs and VSQGs for outreach, some counties choose to additionally look at their LQGs.

A review of the HAZ WASTE list, as provided by EDR, and dated 02/09/2026 has revealed that there are 12 HAZ WASTE sites within approximately 0.25 miles of the target property.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there are 2 EDR Hist Auto sites within approximately 0.125 miles of the target property.

EXECUTIVE SUMMARY

EDR Hist Cleaner: EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Cleaner list, as provided by EDR, has revealed that there is 1 EDR Hist Cleaner site within approximately 0.125 miles of the target property.

Hazardous Waste Summary:

Waste Code:	D001
Waste Description:	Ignitable Waste
Waste Code:	D002
Waste Description:	Corrosive Waste
Waste Code:	D007
Waste Description:	Chromium
Waste Code:	D009
Waste Description:	Mercury
Waste Code:	D010
Waste Description:	Selenium
Waste Code:	D016
Waste Description:	2,4-D (2,4-Dichlorophenoxyacetic Acid)
Waste Code:	D035
Waste Description:	Methyl Ethyl Ketone
Waste Code:	P001
Waste Description:	2h-1-Benzopyran-2-One, 4-Hydroxy-3-(3-Oxo-1-Phenylbutyl)-, & Salts, When Present At Concentrations Greater Than 0.3% (Or) Warfarin, & Salts, When Present At Concentrations Greater Than 0.3%

Environmental Interest/Information System:

The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal NPL (Superfund) sites

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 03/26/2026	Source: EPA
Date Data Arrived at EDR: 04/01/2026	Telephone: N/A
Date Made Active in Reports: 04/21/2026	Last EDR Contact: 07/01/2026

	Data Release Frequency: Quarterly

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Lists of Federal Delisted NPL sites

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425(e), sites may be deleted from the NPL where no further response is appropriate.

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly known as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Lists of Federal CERCLA sites with NFRAP

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be potential NPL site.

Date of Government Version: 03/26/2026	Source: EPA
Date Data Arrived at EDR: 04/01/2026	Telephone: 800-424-9346

Lists of Federal RCRA TSD facilities

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Lists of Federal RCRA generators

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

State and tribal institutional control / engineering control registries

ENG CONTROLS: Institutional Controls Registry

The registry is a database of all contaminated sites in the state of Florida which are subject to engineering controls. Engineering Controls encompass a variety of engineered remedies to contain and/or reduce contamination, and/or physical barriers intended to limit access to property. ECs include fences, signs, guards, landfill caps, provision of potable water, slurry walls, sheet pile (vertical caps), pumping and treatment of groundwater, monitoring wells, and vapor extraction systems.

BROWNFIELDS AREAS: Brownfields Areas Database

A "brownfield area" means a contiguous area of one or more brownfield sites, some of which may not be contaminated, that has been designated as such by a local government resolution. Such areas may include all or portions of community redevelopment areas, enterprise zones, empowerment zones, other such designated economically deprived communities and areas, and Environmental Protection Agency (EPA) designated brownfield pilot projects. This layer provides a polygon representation of the boundaries of these designated Brownfield Areas in Florida.

BSRA: Brownfield Site Rehabilitation Agreements Listing

The BSRA provides DEP and the public assurance that site rehabilitation will be conducted in accordance with Florida Statutes and DEP's Contaminated Site Cleanup Criteria rule. In addition, the BSRA provides limited liability protection for the voluntary responsible party. The BSRA contains various commitments by the voluntary responsible party, including milestones for completion of site rehabilitation tasks and submittal of technical reports and plans. It also contains a commitment by DEP to review technical reports according to an agreed upon schedule. Only those brownfield sites with an executed BSRA are eligible to apply for a voluntary cleanup tax credit incentive pursuant to Section 376.30781, Florida Statutes.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

EPA WATCH LIST: EPA Watch List

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

PFAS NPDES: Clean Water Act Discharge Monitoring Information

Any discharger of pollutants to waters of the United States from a point source must have a National Pollutant Discharge Elimination System (NPDES) permit. The process for obtaining limits involves the regulated entity (permittee) disclosing releases in a NPDES permit application and the permitting authority (typically the state but sometimes EPA) deciding whether to require monitoring or monitoring with limits. Caveats and Limitations: Less than half of states have required PFAS monitoring for at least one of their permittees and fewer states have established PFAS effluent limits for permittees. New rulemakings have been initiated that may increase the number of facilities monitoring for PFAS in the future.

PFAS PT 139 AIRPORT: All Certified Part 139 Airports PFAS Information Listing

Since July 1, 2006, all certified part 139 airports are required to have fire-fighting foam onsite that meet military specifications (MIL-F-24385) (14 CFR 139.317). To date, these military specification fire-fighting foams are fluorinated and have been historically used for training and extinguishing. The 2018 FAA Reauthorization Act has a provision stating that no later than October 2021, FAA shall not require the use of fluorinated AFFF. This provision does not prohibit the use of fluorinated AFFF at Part 139 civilian airports; it only prohibits FAA from mandating its use. The Federal Aviation Administration's document AC 150/5210-6D - Aircraft Fire Extinguishing Agents provides guidance on Aircraft Fire Extinguishing Agents, which includes Aqueous Film Forming Foam (AFFF).

UST FINDER RELEASE: UST Finder Releases Database

US EPA's UST Finder data is a national composite of leaking underground storage tanks. This data contains information about, and locations of, leaking underground storage tanks. Data was collected from state sources and standardized into a national profile by EPA's Office of Underground Storage Tanks, Office of Research and Development, and the Association of State and Territorial Solid Waste Management Officials.

Date of Government Version: 11/21/2025	Source: Environmental Protection Agency
Date Data Arrived at EDR: 05/28/2026	Telephone: 202-564-0394
Date Made Active in Reports: 06/15/2026	Last EDR Contact: 05/07/2026
Number of Days to Update: 18	Next Scheduled EDR Contact: 08/17/2026
	Data Release Frequency: Semi-Annually

UST FINDER: UST Finder Database

EPA developed UST Finder, a web map application containing a comprehensive, state-sourced national map of underground storage tank (UST) and leaking UST (LUST) data. It provides the attributes and locations of active and closed USTs, UST facilities, and LUST sites from states and from Tribal lands and US territories. UST Finder contains information about proximity of UST facilities and LUST sites to: surface and groundwater public drinking water protection areas; estimated number of private domestic wells and number of people living nearby; and flooding and wildfires.

FL Cattle Dip. Vats: Cattle Dipping Vats

From the 1910's through the 1950's, these vats were filled with an arsenic solution for the control and eradication of the cattle fever tick. Other pesticides, such as DDT, were also widely used. By State law, all cattle, horses, mules, goats, and other susceptible animals were required to be dipped every 14 days. Under certain circumstances, the arsenic and other pesticides remaining at the site may present an environmental or public health hazard.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

DADE MOP: Marine Facilities Operating Permit

What is this permit used for? Miami-Dade County Ordinance 89-104 and Section 24-18 of the Code of Miami-Dade County require the following types of marine facilities to obtain annual operating permits from DERM: All recreational boat docking facilities with ten (10) or more boat slips, moorings, davit spaces, and vessel tie-up spaces. All boat storage facilities contiguous to tidal waters in Miami-Dade County with ten (10) or more dry storage spaces including boatyards and boat manufacturing facilities.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data

Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Date of Government Version: 02/01/2026

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:

Source: American Hospital Association, Inc.
Telephone: 312-280-5991

The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing

Source: Centers for Medicare & Medicaid Services
Telephone: 410-786-3000

A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes

Source: National Institutes of Health
Telephone: 301-594-6248

Information on Medicare and Medicaid certified nursing homes in the United States.

Public Schools

Source: National Center for Education Statistics
Telephone: 202-502-7300

The National Center for Education Statistics' primary database on elementary and secondary public education in the United States. It is a comprehensive, annual, national statistical database of all public elementary and secondary schools and school districts, which contains data that are comparable across all states.

North Map:	50050711 OVIEDO, FL
Version Date:	2024

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General North

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

<u>Flood Plain Panel at Target Property</u>	<u>FEMA Source Type</u>
12095C0280F	FEMA FIRM Flood data

12117C0280F	FEMA FIRM Flood data

NATIONAL WETLAND INVENTORY

<u>NWI Quad at Target Property</u>	<u>NWI Electronic Data Coverage</u>
OVIEDO SW	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data:*

Search Radius:	1.25 miles
Status:	Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

<u>MAP ID</u>	<u>LOCATION FROM TP</u>	<u>GENERAL DIRECTION GROUNDWATER FLOW</u>
2	1/4 - 1/2 Mile South	W
1G	1/4 - 1/2 Mile South	W

For additional site information, refer to Physical Setting Source Map Findings.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

Soil Map ID: 1

Soil Component Name: Zolfo

Soil Surface Texture: fine sand

Hydrologic Group: Class C - Slow infiltration rates. Soils with layers impeding downward movement of water, or soils with moderately fine or fine textures.

Soil Drainage Class: Somewhat poorly drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Low

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 84 inches

Soil Layer Information							
Layer	Boundary		Soil Texture Class	Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
	Upper	Lower		AASHTO Group	Unified Soil		
1	0 inches	5 inches	fine sand	Not reported	Not reported	Max: 14 Min: 4	Max: 6.5 Min: 3.6
2	5 inches	55 inches	fine sand	Not reported	Not reported	Max: 14 Min: 4	Max: 6.5 Min: 3.6
3	55 inches	79 inches	fine sand	Not reported	Not reported	Max: 14 Min: 4	Max: 6.5 Min: 3.6

Soil Map ID: 2

Soil Component Name: Archbold

Soil Surface Texture: fine sand

Hydrologic Group: Class A - High infiltration rates. Soils are deep, well drained to excessively drained sands and gravels.

Soil Drainage Class: Moderately well drained

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Low

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 145 inches

Soil Layer Information							
Layer	Boundary		Soil Texture Class	Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
	Upper	Lower		AASHTO Group	Unified Soil		
1	0 inches	1 inches	fine sand	Not reported	Not reported	Max: 141 Min: 141	Max: 6.5 Min: 3.6
2	1 inches	79 inches	fine sand	Not reported	Not reported	Max: 141 Min: 141	Max: 6.5 Min: 3.6

Soil Map ID: 3

Soil Component Name: Smyrna

Soil Surface Texture: fine sand

Hydrologic Group: Class B/D - Drained/undrained hydrology class of soils that can be drained and are classified.

Soil Drainage Class: Poorly drained

Hydric Status: Partially hydric

Corrosion Potential - Uncoated Steel: High

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 31 inches

Soil Layer Information							
Layer	Boundary		Soil Texture Class	Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
	Upper	Lower		AASHTO Group	Unified Soil		
1	0 inches	16 inches	fine sand	Not reported	Not reported	Max: 141 Min: 42	Max: 5.5 Min: 4.5
2	16 inches	27 inches	fine sand	Not reported	Not reported	Max: 141 Min: 42	Max: 5.5 Min: 4.5
3	27 inches	79 inches	fine sand	Not reported	Not reported	Max: 141 Min: 42	Max: 5.5 Min: 4.5

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Map ID: 4

Soil Component Name: Basinger

Soil Surface Texture: fine sand

Hydrologic Group: Class D - Very slow infiltration rates. Soils are clayey, have a high water table, or are shallow to an impervious layer.

Soil Drainage Class: Very poorly drained

Hydric Status: All hydric

Corrosion Potential - Uncoated Steel: High

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
Layer	Boundary		Soil Texture Class	Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
	Upper	Lower		AASHTO Group	Unified Soil		
1	0 inches	7 inches	fine sand	Not reported	Not reported	Max: 141 Min: 42	Max: 5.5 Min: 4.5
2	7 inches	31 inches	fine sand	Not reported	Not reported	Max: 141 Min: 42	Max: 5.5 Min: 4.5
3	31 inches	46 inches	fine sand	Not reported	Not reported	Max: 141 Min: 42	Max: 5.5 Min: 4.5
4	46 inches	79 inches	fine sand	Not reported	Not reported	Max: 141 Min: 42	Max: 5.5 Min: 4.5

Soil Map ID: 5

Soil Component Name: Water

Soil Surface Texture: fine sand

Hydrologic Group: Class D - Very slow infiltration rates. Soils are clayey, have a high water table, or are shallow to an impervious layer.

Soil Drainage Class:

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

No Layer Information available.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Map ID: 6

Soil Component Name: St. Johns

Soil Surface Texture: fine sand

Hydrologic Group: Class B/D - Drained/undrained hydrology class of soils that can be drained and are classified.

Soil Drainage Class: Poorly drained

Hydric Status: Partially hydric

Corrosion Potential - Uncoated Steel: High

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 20 inches

Soil Layer Information							
Layer	Boundary		Soil Texture Class	Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
	Upper	Lower		AASHTO Group	Unified Soil		
1	0 inches	11 inches	fine sand	Not reported	Not reported	Max: 141 Min: 42	Max: 5.5 Min: 3.6
2	11 inches	24 inches	fine sand	Not reported	Not reported	Max: 141 Min: 42	Max: 5.5 Min: 3.6
3	24 inches	44 inches	fine sand	Not reported	Not reported	Max: 141 Min: 42	Max: 5.5 Min: 3.6
4	44 inches	79 inches	fine sand	Not reported	Not reported	Max: 141 Min: 42	Max: 5.5 Min: 3.6

Soil Map ID: 7

Soil Component Name: Pomello

Soil Surface Texture: fine sand

Hydrologic Group: Class C - Slow infiltration rates. Soils with layers impeding downward movement of water, or soils with moderately fine or fine textures.

Soil Drainage Class: Moderately well drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Low

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 84 inches

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
Layer	Boundary		Soil Texture Class	Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
	Upper	Lower		AASHTO Group	Unified Soil		
1	0 inches	40 inches	fine sand	Granular materials (35 pct. or less passing No. 200), Fine Sand.	Not reported	Max: 141 Min: 42	Max: 8.4 Min: 5.1
2	40 inches	55 inches	fine sand	Granular materials (35 pct. or less passing No. 200), Fine Sand.	Not reported	Max: 141 Min: 42	Max: 8.4 Min: 5.1
3	55 inches	79 inches	fine sand	Granular materials (35 pct. or less passing No. 200), Fine Sand.	Not reported	Max: 141 Min: 42	Max: 8.4 Min: 5.1

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

Permit Seq #: 1
Permit App Process Status: CLOS
Station Type: Production Well
Monitoring: N
FL Statute: 40C-2
Permit Project Name: Westinghouse Electric Corp.
Date Received: 08-OCT-85
Permit Expiration: 10-DEC-92
Permit Status: Closed
Casing Diameter (in): 8
Total Well Depth (ft): 45
Station Status: Active
Compliance Status: In Compliance

Official Permit ID: 3346
Permit Type: Initial Sequence
Station Name: 1
Site Name: Westinghouse Electric Corp.
Permit Stage: Closed
Statute Description: CUP Individual (40C-2)

Decision Made: 10-DEC-85
Recommendation: Approval
Project Acres: 97
Casing Depth (ft): 25
Water Source: Surficial Aquifer
Pump Capacity: 25
Project Use: Mining/Dewatering

PHYSICAL SETTING SOURCE RECORDS SEARCHED

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)

Source: United States Geologic Survey

EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map

Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.

Source: FEMA

Telephone: 877-336-2627

Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005, 2010 and 2015 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Wetlands Inventory

Telephone: 850-245-8238

HYDROGEOLOGIC INFORMATION

AQUIFLOW^R Information System

Source: EDR proprietary database of groundwater flow information

EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit

Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

Telephone: 800-672-5559

SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)

This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.
